PROFESSIONAL PROFILE

Systems Engineering student combining expertise in multi-modal data annotation, computer vision validation, and enterprise resource planning (ERP/SAP). Proven background in analyzing visual and aerial footage, defining quality benchmarks, and applying programming skills to support machine learning and technical workflows. Adaptable and comfortable collaborating with engineering teams in agile, ambiguous environments to build scalable operational processes. Currently expanding technical proficiencies and developing professional English communication skills (intermediate).

EXPERIENCE

Data Annotation & Processing Specialist / Operations Support

- Analyzed aerial and visual footage, accurately labeling objects following strict project guidelines for machine learning training datasets.
- Utilized CVAT and AAT tools to perform multi-modal data annotations and support object classification, detection, and validation workflows.
- Ensured data quality and consistency across complex annotation tasks to directly support computer vision model performance and accuracy.
- Performed structured quality checks and validation techniques to maintain high-performance benchmarks and operational KPIs.
- Maintained detailed workflow documentation and standardized procedures (SOPs) to ensure team-wide compliance and efficient scaling.

Inventory and Process Management (Supply Chain)

Experience: 2 years and 7 months / Currently

Kerry Group (Baltimore Spice)

- Managed ERP systems (SAP) for real-time inventory control and traceability.
- Coordinated material reception and distribution processes, optimizing workflows with technological tools.
- Analyzed inventory data to ensure accuracy and efficiency in stock management.
- Developed strong relationships with staff from different departments (production, logistics, suppliers), facilitating smooth communication for problem resolution and process improvement.

EDUCATION

- 2021 - Present: Systems Engineering | Universidad Politécnica Internacional *(78% completed)*
- 2020 - 2020: PC Maintenance Course | Universidad de Costa Rica (UCR) *(Completed)*

SKILLS

- Annotation Tools: CVAT, AAT, and multi-modal data labeling workflows.
- Programming Languages: Python, C#, HTML, CSS, JavaScript.
- ERP & Supply Chain Operations: SAP ERP, inventory control, traceability, supply chain.
- Troubleshooting & Process Optimization: Root cause analysis, SOP definition, and quality standard monitoring.
- Operating Systems & Technical Tools: Windows and Linux environments, Microsoft Excel, reporting tools, and shell scripts.
- Database Management: SQL, Visual Studio.
